### **Notice**

Neither the amendment filed on 17 April 2002 nor the amendment filed on 15 May 2002 complied with Rule 121 as it stood at the time of filing of either of these amendments. However, as the office has just recently been made aware of the 15 May 2002 amendment, both amendments will be accepted and considered together under rule 135(c) as set forth in MPEP 710.01 as a response so that the ments of the application will be examined. The Examiner is able to act on the claims but the amendments made to the specification have not been made. Any reply to this action must be in conformance with 37CFR 1.21 in its current form as amended effective on 30 July 2003. Please note a copy of the updated version of Rule 121 is attached to this office action for your convenience.

#### **DETAILED ACTION**

## Claim Objections

Claims 8, 11, 12, 14, 15, 16, 17 and 19 are objected to because of the following informalities:

- Claim 8, in the last line, change "with predetermined intervals" to read, "at predetermined intervals".
- Claim 11, line 1, change "comprising" to read, "comprises"; and in line 2, change "which are" to read, "and located".
- Claim 12, line 2, change "with respect to on both sides" to read, "respectively on both sides".
- Claim 14, change "increase the ring portion to the periphery" to read, "increase from the ring portion toward the periphery"
- Claim 15, line 4, change "gradually according as" to read, "gradually as".
- Claim 16, line 1, change "comprising" to read, "comprises"; and in line 2, change "which are" to read "located".
- Claim 17, line 2, change "with respect to on both side surfaces" to read, "respectively on both side surfaces".

Art Unit: 3723

Claim 19, line 3, change "according as" to read, "as".

Appropriate correction is required.

# Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, lines 11 and 12, recite the limitation "surface of the circular steel disk are radially overlapped in position with the wings on the other side surface" which is awkwardly and confusingly worded.

Claims 10 and 15 recite the limitation "both arcs" in 1. There is insufficient antecedent basis for this limitation in the claim.

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 8-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ji '017 in view of Achterberg '786.

Ji discloses a saw blade comprising a steel disk including an opening at the center for connecting with a shaft of a motor-driven tool and particulate bearing layer on both surfaces of the steel disk, a plurality of streamlined wings extending from the ring portion to the periphery of the steel disk, the streamlined wings are formed on both side surfaces of the steel disk so that the first streamlined wings are formed on both side surfaces of the steel disk are overlapped with second streamlined wings attached on the other side

**Art Unit: 3723** 

surface; the first streamlined wings on one side surface of the circular steel disk are overlapped in a full and aligned manner with the second streamlined wings on the other side surface of the circular disk; the steel disk comprises a plurality of slits on its outer periphery at predetermined intervals between the cutting segments; and the cutting segments are turbo-type defined as planar jig-jag profiles with respect to both sides of the cutting surface. Ji does not specifically disclose that the blade contained slits on the periphery at predetermined intervals with holes with sizes increasing from the center toward the periphery of the blade. Achterberg discloses a saw blade containing slits located at predetermined intervals along the periphery and holes with sizes increasing from the center to the periphery of the saw blade so as to improve the cutting ability of the blade and to aid in the dissipation of the heat contained therein. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have made the saw blade of Ji to have slits located at predetermined intervals along the periphery and holes with sizes increasing from the center to the periphery of the saw blade as taught by Achterberg, so as to improve the cutting ability of the blade and to aid in the dissipation of the heat contained therein.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alvin J Grant whose telephone number is (703) 305-3315. The examiner can normally be reached on Mon-Fri 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Joseph J Hail can be reached on (703) 308-2687. The fax phone number for the organization where this
application or proceeding is assigned is 703-872-9306.
